

## Network Design

Considering a new network for your environment, but have no idea where to start? Already have an existing network but experiencing problems and need a redesign? We evaluate and analyze each environment individually to provide a custom fit design tailored to your requirements and objectives.

MSI can help design a custom tailored network for your specific requirements and objectives. Whether you need a simple network connecting only two computers, or a network connecting thousands of devices—we truly have the five-star network design solution you are seeking!

Would you like to be able to share files or printers between two or three computers? We can design a simple peer-to-peer network solution where you can share files, printers, and more! Why work on inefficient and isolated computers another day? Contact us today!

Do you have a network in place, but the computer where the printer is connected must be turned on to print? Would you prefer to share only one cost effective network printer instead of having to support and maintain a separate printer on each computer? We can setup a printing system on your network that has no dependencies. No need for multiple printers or having to keep a computer powered on to print. Why go another day supporting an expensive and inefficient printing system? Contact us today!

Need the ability to store your files in one location, have centralized backup, manage all your network resources, or provide enterprise-class authentication? Whether you need a single server in one location or hundreds of servers distributed to numerous locations—we have the solution for you! Why go another day without centralized backup, having critical files scattered throughout your organization, or no efficient means for managing your network resources? Contact us today!
